

KIK-LOK ANCHOR

inform

FOR KICKERLESS WALL CONSTRUCTION

DESCRIPTION

Kik-Lok Anchors are used in kickerless construction of walls removing the need for formation of a traditional concrete kicker. The 'T' Shaped KIK-LOK Anchors leg is pushed into the wet concrete slab along centre line of the proposed wall. Once set in position the adjustable horizontal bar can be moved from side to side until the correct position is obtained.

DESIGN:

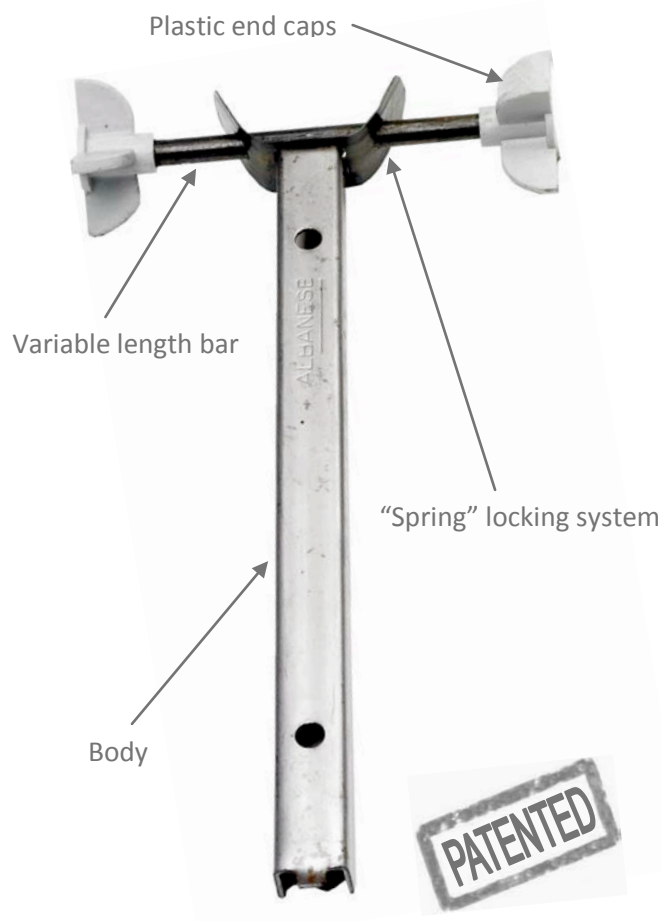

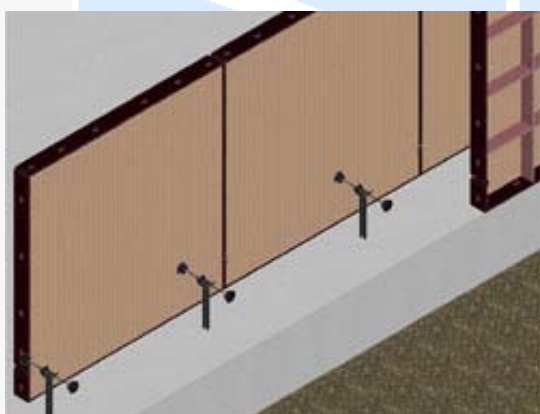

- Very robust - Steel construction with plastic end caps
- Quick and easy adjustment
- Long body gives solid fixing

ADVANTAGES

- Ready assembled
- No tools required
- Unique locking system
- Cost effective
- Time saving
- Eliminates costly set up of kicker shuttering

METHOD OF APPLICATION

1. Simply push the main body of the Kik-Anchor into the fresh concrete slab on the approximate centre line of the wall to be formed.
2. Once the concrete has set, the spacer rod can be easily and precisely adjusted by pinching the spring mechanism to allow spacer rod to move from side to side.

Item Code	Wall Width (mm)	Pack Size
SKAF150	150	50
SKAF175	175	50
SKAF200	200	50
SKAF225	225	50
SKAF250	250	50
