

NOEplast TEXTURED FORMLINER

NOEplast textured form liners are used extensively to give plain concrete structures a patterned and visually more acceptable finish.

The NOEplast range of liners offers over 100 different standard type patterns, ranging from a simple sawn board effect to complicated and realistic rock type finishes. Other designs can be custom created to meet your specific requirements and can be designed to match an existing concrete finish or profile.

Manufactured from a durable PVC/Rubber compound, NOEplast formliners are suitable for multiple reuses.
